Psychosocial factors can cause a biological effect by predisposing the patient to risk factors. An example is that depression by itself may not cause liver problems, but a depressed person may be more likely to have alcohol problems, and therefore liver damage. Perhaps it is this increased risk-taking that leads to an increased likelihood of ...

Introduction Care for transgender and gender non-conforming (TGNC) youth is a rapidly expanding field of medicine, and lends itself to controversy among professionals. It stands to reason that transgender adults started as transgender youth, and if identified in childhood or adolescence may benefit from early access to hormone blockers and/or gender-affirming hormones.
